

Science Week at SCC

Over 30 Year 6 students from Lansdowne Primary School were treated to a visit to Sittingbourne Community College as part of Science Week...and they had a blast!

This year, the focus for the week was on the idea of change and SCC chose to demonstrate different chemicals and fuels and how they not only create impressive bangs, booms and rockets, they can also have a big impact on our planet. The Year 6 pupils also explored fossils and helped produce the explosions to launch rockets.

Jemma Foreman, Year 6 student from Lansdowne Primary School, said, "It was really cool. I didn't know how to make model fossils but I have now learnt. Also, it was funny when Mr Kenyon lost the rocket."

Miss Murray, Miss Long and Miss Hoy, teachers from Lansdowne, said, "Our trip to SCC linked to our learning on climate change. We got to take part in some experiments which allowed us to understand more about how energy isn't always great for our planet. Explosions, firing rockets and making fossils all helped us think about our impact on the planet - as well as having a huge amount of fun!"

SCC's own students also got involved to help out on the day. Vyanka Erasmus, Year 7, concluded, "Today was amazing! I loved all of the explosions and the rocket. The pupils from Lansdowne were amazing. Definitely not a day to forget."
